## Knowledge recall:

1. What is the relative molecular mass of a molecule?
2. Which substances produce ions in ionic equations?
3. What is the atom economy of a reaction?
4. What is the formula and charge of the nitrate ion?

## Mathematical questions:

What volume of 0.125 moldm $^{-3}$ sodium hydroxide is needed to titrate $25.0 \mathrm{~cm}^{3}$ of 0.085 moldm $^{-3}$ sulphuric acid?

Carbon dioxide is prepared by the action of 2.00 moldm $^{-3}$ hydrochloric acid on calcium carbonate. What volume of acid is required to give $10.0 \mathrm{dm}^{3}$ of carbon dioxide, measured at $9.9 \times 10^{4} \mathrm{~Pa}$ and $26.0^{\circ} \mathrm{C}$ ?

## Knowledge recall:

1. What are the formulae for the following acids? Hydrochloric, nitric, sulphuric
2. What are the formulae of sodium sulphate, calcium hydroxide, lithium carbonate, magnesium chloride.
3. Give the units for $P, V, n, R$ and $T$

## Mathematical questions:

A 2.00 g sample of limestone is allowed to react with $200 \mathrm{~cm}^{3}$ of $0.200 \mathrm{moldm}^{-3}$ hydrochloric acid. The excess acid required $49.6 \mathrm{~cm}^{3}$ of 0.100 moldm $^{-3}$ sodium hydroxide solution for neutralisation. Calculate the percentage by mass of calcium carbonate in the limestone.

Calculate the atom economy to make oxygen from hydrogen peroxide.

$$
\mathrm{H}_{2} \mathrm{O}_{2} \rightarrow \mathrm{H}_{2} \mathrm{O}+\mathrm{O}_{2}
$$
